

Infinity Hash

EXECUTIVE SUMMARY Q1 2025

January 20th, 2025

Introduction

Founded in June 2023, Infinity Hash is transforming the Bitcoin mining industry through an innovative reinvestment system focused on long-term growth and sustainability. Central to this system is a hashrate distribution model featuring Infinity Hash Stacks (IHS) and their tokenized counterpart, xIHS. IHS represent participations in Infinity Hash's mining operation, entitling holders to receive daily rewards generated by their entire fleet of mining machines. This innovation removes all access barriers to Bitcoin mining, while providing full custody, and the possibility to cash out at any point.

Infinity Hash also highly values transparency and community involvement, ensuring that all operations are open, and all information is accessible to investors. Additionally, by employing some of the lowest electricity costs in the industry, the project maximizes profitability and sustainability for its investors.

Core Proposition

The cornerstone of Infinity Hash's success lies in its reinvestment system, which drives continuous growth and ensures sustainable profitability over the long term. By reinvesting 50% of the mining rewards into acquiring additional mining equipment, Infinity Hash maintains and increases the hashrate backing each IHS, and also their value and returns over time. This approach ensures the project's long-term viability, making it unique in the Bitcoin mining sector.

Infinity Hash also prioritizes ease of use and accessibility, offering a hands-off investment experience. Its stacks system, including IHS and the xIHS token, provides daily rewards without the need for user action. This way, Investors can effortlessly participate in Bitcoin mining without the need for technical expertise or significant capital. With the flexibility to self custody xIHS and cash out at any time, Infinity Hash makes Bitcoin mining straightforward and accessible to everyone, offering a seamless way to obtain a passive income.

Performance in 2024

Over the last year, Infinity Hash has experienced substantial growth, propelled further by the current bull market. Since January 2024, the project's total hashrate has increased almost tenfold. Moreover, thanks to Infinity Hash's reinvestment strategy, the hashrate backing each IHS nearly tripled in 2024, increasing from 50 GH/s to 125 GH/s. In 2025, the substantial infrastructure investments made in Q4 2024 will continue to drive hashrate growth per share.

Hashrate Per IHS in GH/s

On the back of these increases, IHS holders have enjoyed significant benefits. The platform's reinvestment strategy and energy-efficient mining operations have provided an impressive APR, significantly outpacing traditional mining investments.

Full APR of Infinity Hash (targeting +/-33%)

Moreover, even without factoring in daily rewards, investors have benefited from the appreciation of IHS. As Bitcoin's price doubled in 2024 and hashrate per IHS continued to rise, the price of IHS increased from \$2.4 in January to \$3.9 by December. This price appreciation alone represents a gain of approximately 60% over the past year. An investor who purchased \$1,000 worth of IHS in January would see their IHS holdings valued at over \$1,600 today.

Portfolio value in 2024 (without rewards)

Tokenizing Bitcoin Mining – The xIHS Token

xIHS is a tokenized version of IHS on the Solana blockchain, designed to offer additional flexibility to investors. By staking IHS into the xIHS staking pool in the [dashboard](#), IHS holders receive xIHS tokens representing their stacks. The rewards produced by the IHS in the staking pool are used to buy additional IHS. This way, xIHS tokens accrue value as they are backed by an increasing amount of IHS in the pool. Holders of xIHS can realize this value at any time by selling or unstaking their tokens.

This system allows Infinity Hash to provide daily rewards without the need for ten-thousands of daily transactions. Additionally, xIHS tokens are fully transferable and sellable, allowing investors to manage their investment as they see fit.

Transparency and Trust

Infinity Hash prides itself on complete transparency, providing public access to mining data, energy costs, and equipment purchases. Each miner is assigned a unique ID, allowing stakeholders to link data from the project's [monthly reports](#) with those on [Infinity Hash's public mining pool](#). Additional [weekly updates](#) offer continuous insights and overview.

Market Position, Strategic Expansion & Growth Potential

Infinity Hash launched in June 2023 and is swiftly consolidating its position in the Bitcoin mining industry. With electricity costs already below industry averages, the project aims to reduce expenses even further by strategically opening new mining locations and utilizing flare gas and heat recovery technologies.

Infinity Hash's expansion into regions with access to ultra-low-cost energy, such as Northern Asia (\$0.015/kWh) and Ethiopia (\$0.035/kWh), positions it to deliver unparalleled profitability:

Location 1: Central Asia

- Operating: Since 2023
- Energy price: \$0.045-0.035 / kWh
- Energy source: Hydro & flare gas
- Free capacity: 450 MW

Location 2: Northern Asia

- Mining starts: Q1-Q2 2025
- Energy price: \$0.015 / kWh
- Energy source: Flare gas
- Free capacity: 100 MW

Location 3: Ethiopia

- Mining starts: Q2-Q4 2025
- Energy price: \$0.035 / kWh
- Energy source: Hydro
- Free capacity: 300 MW

Location 4: Finland

- Mining starts: 2026
- Energy price: \$0.040 / kWh
- Energy source: Mixed + heat recovery
- Free capacity: 25 MW

Location 5: Sweden

- Mining starts: 2026–2027
- Energy price: \$0.025 / kWh
- Energy source: Mixed + heat recovery
- Free capacity: 400 MW

Newest Developments

In 2024, Infinity Hash opened their new head office in Hong Kong. With it, they are well positioned within one of the world's most business-friendly regions, which creates additional opportunities for growth and expansion.

To further support their community, Infinity Hash has developed custom firmware for miners, designed to optimize efficiency and enhance returns.

Investment Opportunity in Q1

The project is ready to scale and aggressively expand its operations during the Q1 and Q2 2025 investment period.

The Bitcoin mining market conditions in Q1 2025 present an exceptional investment opportunity, as miner prices are low, Bitcoin is in the beginning of a bull run and Infinity Hash's new flare gas location is ready for immediate miner deployment. Infinity Hash has set the target to reach 1 EH/s of mining capacity in 2025. **Meanwhile, the maximum investment capacity for this quarter is set at \$600 million,** which allows substantial room for large-scale investment.

Conclusion

Infinity Hash is leading innovation in the Bitcoin mining industry with its community-driven approach, emphasizing sustainability, transparency, and ease of access. Utilizing a unique reinvestment system and low-cost energy sources, Infinity Hash offers daily rewards while ensuring long-term profitability. The Stacks system, including Infinity Hash Stacks (IHS) and the tokenized xIHS, allows investors effortless access to the Bitcoin mining sector. With strategic expansions and decreasing electricity costs, Infinity Hash provides more than **double the hashrate per USD to investors when compared to most publicly listed Bitcoin mining companies.** Join us in revolutionizing Bitcoin mining and seize this lucrative opportunity!

Token Overview

Infinity Hash Stacks: IHS

IHS provide daily cash flow from mining rewards at a long-term target APR of +/- 33%. These are life-time, sellable project participations with no expiry, community voting rights and always backed by Bitcoin mining hardware. IHS is only available in our [dashboard](#).

Staked Infinity Hash Stacks: xIHS

xIHS is a staked version of IHS and available in our dashboard and as a Solana token. xIHS compounds daily mining rewards from IHS, which results in the price of xIHS increasing instead of paying out daily mining rewards. xIHS is trading on [CoinEx](#) and [Raydium](#) and available in our [dashboard](#).
